Summary

I am a full-stack engineer with over 10 years of experience building scalable web and mobile applications. I specialize in Java and Spring Boot for secure backend systems and RESTful APIs, along with React, Next.js, and TypeScript for modern product development. My background includes microservices, cloud deployments on AWS and Azure, and performance-focused architecture for enterprise applications in fintech and logistics.

EDUCATION

Silicon Valley University

Aug 2011 - May 2015

Bachelor's Degree, Computer Science

- **Achievements:** Built practical knowledge of Algorithms, Data Structures, Operating Systems, Software Engineering, Computer Networks, and Web Development by working on hands-on labs and team projects, applying Java, C++, Python, and JavaScript in real coding scenarios.

Professional Experience

Thoughtbot

Sep 2022 - Present

Senior Software Engineer

Hybrid

- Led full lifecycle development of dynamic web applications using React, Next.js, and TypeScript, applying object-oriented programming principles to build performant, scalable, and maintainable enterprise products for complex industries including FinTech and Logistics.
- Architected and developed backend services with Java 17, Spring Boot, Spring REST, Spring Data, and Spring AOP, applying API design practices and optimizing PostgreSQL-backed relational database models for secure financial industry solutions using JWT and OAuth2.
- Implemented robust messaging workflows using Kafka and RabbitMQ, streamlining communication between microservices and supporting high-throughput, transactional processing with strong data consistency guarantees and caching systems.
- Deployed scalable applications via Docker and Kubernetes on AWS, leveraging ECS, EC2, Elastic Container Registry, Lambda, ELB, S3, EFS, SQS, SES, API Gateway, ElastiCache, RDS (PostgreSQL), DynamoDB, and Redshift, with CI/CD orchestrated through GitHub Actions and Jenkins.
- Integrated third-party services like Firebase, Stripe, and Google APIs, and exposed APIs through Swagger/OpenAPI for team collaboration and seamless system integration.
- Instrumented monitoring and observability using Prometheus, Grafana, and the ELK Stack, enabling proactive detection of performance bottlenecks across PostgreSQL queries and microservice workloads in large-scale, data-driven platforms.
- Wrote comprehensive automation testing suites with Jest, Cypress, JUnit, and Mockito, validating business logic, data persistence layers, and API contracts to ensure stability in regulated environments.
- Mentored junior developers on code quality, MapStruct, best practices with Lombok, Git workflows, and effective database design with PostgreSQL in a cross-functional agile team, fostering a culture of experimentation, growth, and proactive problem-solving.

DraftKings

May 2020 - Aug 2022

Software Engineer

Remote

- Developed interactive user interfaces with React, Redux, and Material UI, improving client engagement across the platform.
- Contributed to backend microservices using Java and Spring Boot, applying object-oriented programming principles and optimizing query performance with Hibernate and JPA.
- Built and maintained CI/CD pipelines with Docker, Azure DevOps, and Kubernetes, reducing deployment time and errors.
- Worked on API design using Swagger/OpenAPI and implemented secure authentication with OAuth2 and JWT for RESTful services.
- Conducted unit and integration testing using JUnit, Mockito, and React Testing Library, improving system reliability through automation testing.
- Participated in code reviews, daily standups, and sprint planning, helping deliver features on time in a Scrum environment.
- Integrated observability tools such as Grafana and Jaeger to monitor application behavior and trace distributed requests.

Fitbod

Sep 2017 - Apr 2020

Full Stack Engineer

Remote

- Created reusable and mobile-responsive components using React and Tailwind CSS, contributing to a consistent and sleek user experience.
- Collaborated with backend teams to build RESTful services in Node.js and Express.js, later contributing to modules written in Spring Boot as the stack evolved.
- Assisted in creating GraphQL endpoints to support complex data queries across the UI.
- Configured and maintained CI/CD pipelines on AWS using Docker and GitHub Actions for streamlined deployment.
- Contributed to test automation using Jest, Cypress, and Postman for API testing.
- Built dashboards with Prometheus and Grafana to monitor system health and set alerts for key metrics.

- Actively participated in backlog grooming and sprint retrospectives to continuously improve team workflows.

RackSpace Technology

Jun 2015 - Aug 2017

Junior Software Engineer

Onsite

- Supported the development of frontend modules using React and Material UI, gaining hands-on experience with responsive layout and component design.
- Assisted in implementing backend APIs in Java using Spring Boot, and wrote simple database queries with MySQL and Hibernate.
- Helped maintain build configurations with Maven, and contributed to automated deployments using Jenkins.
- Wrote unit tests with JUnit and learned mocking techniques with Mockito under guidance from senior engineers.
- Participated in code reviews and shadowed senior developers to improve understanding of enterprise application patterns.
- Created internal documentation and simple Swagger-based API references for team use.

SKILLS

- **Languages:** TypeScript, JavaScript, Java (including Java 17), HTML, SCSS, SQL, Kotlin, C++, Golang
- **Frontend:** React, React Native, Next.js, Redux, MobX, Jotai, Zustand, React Query, Tailwind CSS, Material UI, Framer Motion, Storybook, React Hook Form, React Testing Library
- **Backend:** Java, Spring, Spring Boot, Spring Security, Spring REST, Spring Data, Spring AOP, Hibernate, JPA, Node.js, Express.js, Nest.js, RabbitMQ, Kafka, Redis, Object-oriented Programming, API Design, Caching Systems
- **Build Tools:** Maven, Gradle
- **Cloud & DevOps:** CI/CD Pipelines, Docker, Kubernetes, AWS (ECS, EC2, Elastic Container Registry, Lambda, ELB, S3, EFS, SQS, SES, API Gateway, ElastiCache, RDS, DynamoDB, Redshift), Azure, GCP, GitHub Actions
- **Tools & Technologies:** Git, RESTful APIs, GraphQL, Swagger/OpenAPI, OAuth2, JWT, Lombok, MapStruct, Jest, Cypress, Vite, Webpack, ESLint, Prettier, Figma
- **Monitoring & Observability:** Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Jaeger
- **Testing:** JUnit, Mockito, TestNG, Jest, Cypress, Automation Testing
- **Database:** PostgreSQL, MongoDB, MySQL, Firebase, TypeORM, Prisma, RDS, DynamoDB, Redshift, Relational Database Design, Data Warehousing
